

HANIY TURANA

SENIOR DATA ANALYST | COMMERCIAL ANALYTICS | ANALYTICS ENGINEERING

Selangor, Malaysia | 016-4497840 | haniy.turana@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Senior data analytics professional with 9+ years of experience across retail, e-commerce, commercial intelligence, warehouse operations, and customer analytics. Combines strong business judgement with Python, SQL, R, ETL automation, forecasting, pricing analysis, inventory intelligence, and dashboard development. Experienced in processing large transaction datasets, designing reusable analytical pipelines, and partnering with Commercial, Finance, Warehouse, and Operations teams to evaluate trade-offs and turn data into practical decisions. Currently pursuing an MSc in Data Science & Analytics at UKM, with research focused on large-scale retail demand forecasting and inventory optimisation.

CAREER HIGHLIGHTS

- Automated recurring reporting and data workflows using Python, SQL, and VBA, reducing manual effort by approximately 90%.
- Built SKU-level analytics for sales, margin, stock gaps, inventory health, pricing, profitability, and anomaly detection across e-commerce operations.
- Processed more than 1.2 million retail transaction records and developed forecasting features for thousands of SKUs.
- Designed scenario models for pricing, clearance, warehouse capacity, staffing, and profit impact to support cross-functional decision-making.
- Developed self-service analytics dashboards with Streamlit and R Shiny for KPI monitoring and operational investigation.

CORE SKILLS

Programming & Analytics	Python (Pandas, Polars, Scikit-learn), SQL, R, VBA, statistical analysis, scenario modelling
Data Engineering	ETL pipeline design, data modelling, REST APIs, Apache Spark, Hadoop, Hive, Parquet, Linux, Bash, Git
Machine Learning	Demand forecasting, XGBoost, LightGBM, Prophet, customer segmentation, NLP, predictive analytics
BI & Visualisation	Streamlit, R Shiny, Excel Power Query, Looker Studio, dashboard design, KPI frameworks
Databases	PostgreSQL, MongoDB, Cassandra / DataStax Astra DB
Business Domains	Retail and commercial analytics, pricing, margin, inventory, supply chain, e-commerce, warehouse operations

PROFESSIONAL EXPERIENCE

Assistant Manager, E-commerce Analytics | MR D.I.Y.

Nov 2019 - Present

- Designed end-to-end Python and SQL pipelines that consolidate transaction, inventory, pricing, and operational data into reusable analytical datasets, reducing recurring manual reporting effort by approximately 90%.
- Built sales, margin, inventory, and SKU performance analytics supporting commercial reviews, reconciliation, audit queries, campaign evaluation, and day-to-day operational decisions.
- Developed demand forecasting and sales projection models using XGBoost, Prophet, lag features, rolling statistics, campaign signals, and calendar effects to support inventory planning.
- Created inventory reconciliation logic across ERP, OMS, WMS, and warehouse data sources to identify stock gaps, status inconsistencies, unposted movements, and exception cases.
- Designed pricing, margin, clearance, and what-if models that compare revenue, profitability, inventory recovery, holding exposure, and operational feasibility across alternative strategies.
- Built production-style Streamlit and R Shiny dashboards for sales trends, channel performance, SKU velocity, inventory health, margin monitoring, and drill-down analysis.

- Partnered with Commercial, Finance, Warehouse, Operations, and technology vendors to translate business requirements into analytical solutions and process improvements.
- Supported API integration and UAT requirement definition for order, inventory movement, allocation, pick, and shipment confirmation workflows.

- Customer Insights Analyst | Ematic Solutions**

Aug 2017 - Sep 2019
- Used SQL and customer behaviour data to identify revenue growth, retention, segmentation, and campaign optimisation opportunities.
 - Performed behavioural segmentation and trend analysis to support targeted marketing strategies and customer lifecycle decisions.
 - Evaluated pricing and promotional effectiveness and communicated actionable findings to business stakeholders.
 - Automated recurring reporting workflows, improving preparation speed, consistency, and decision-making efficiency.
 - Translated stakeholder questions into structured analyses, clear recommendations, and measurable next steps.

SELECTED PROJECTS

- Retail Demand Forecasting & Inventory Decision Engine:** Built a large-scale forecasting workflow using 1.2M+ transactions and 9,900+ SKUs. Engineered lag, rolling, campaign, payday, seasonal, pricing, and sentiment features; compared XGBoost, LightGBM, and Prophet; and linked forecast error to safety-stock and reorder-point recommendations.
- Enterprise Inventory Reconciliation Analytics:** Designed reconciliation logic linking inventory balances, sales, allocations, transfers, adjustments, and warehouse statuses across multiple systems. Produced exception views for stock gaps, status mismatches, delayed postings, and unresolved movements.
- Commercial Pricing & Clearance Simulator:** Created scenario models comparing selling price, discount, margin, stock clearance, cash recovery, inventory value cleared, operating constraints, and profit or loss. Used the model to present business trade-offs rather than optimise a single KPI.
- Production R Shiny Retail Analytics System:** Developed a secured dashboard using Parquet and Excel ingestion, KPI engines, SKU velocity, margin modelling, stock-health classification, months-of-supply, warehouse valuation, and transaction-level drill-downs.
- Distributed MovieLens Analytics System:** Built a distributed pipeline using Apache Spark for processing, MongoDB for metadata, Cassandra for wide-column analytics storage, and Streamlit for interactive exploration.

EDUCATION

- | | |
|--|--|
| MSc in Data Science & Analytics | Universiti Kebangsaan Malaysia (UKM) Expected 2027 |
| BSc (Hons) in Industrial Statistics | Universiti Utara Malaysia (UUM) 2017 |
